

Logistics in a Box™

*The Turnkey Way To
Expand Your
Logistics Capabilities*

■ What is Logistics in a Box™?

Logistics in a Box™ gives your company a complete logistics and traffic department, with a state-of-the-art transportation management system and a full array of highly respected transportation service providers for you to choose from. If your firm has many dispersed operations and/or needs to quickly expand its logistics capabilities, **Logistics in a Box™** is for you. This turnkey logistics department can be implemented immediately and in multiple locations. It gives your company a virtual traffic management system and puts a complete selection of LTL, truckload, small package and air carriers at your fingertips — as close to you as your web-browser.

■ What are the Benefits?

Logistics in a Box™ spares you all of the time and research involved with negotiating rates and selecting carriers, and saves you all of the capital investment involved in setting up or expanding your own logistics operations. It requires no installation on your computers and provides simple access via the Internet.

Logistics in a Box™ gives you a soup-to-nuts menu of traffic management capabilities. With it, you can plan, schedule, dispatch, and track the movement of your outbound and inbound shipments on a variety of pre-contracted carriers. It lets you process freight bills, administer claims and generate informative management reports. The system also comes with a complete set of shipping documents, including bills of lading, loading manifests, small package shipping labels and advanced shipment notifications (ASN).

■ How Does It Work?

All you need is a PC with a high-speed Internet connection and a printer. No complex communication setup is required.

Using your Internet browser, you simply plug in your shipment's destination zip code, weight and freight class. The system recommends two or three different reputable carriers and lists their transit times and charges for the shipment. Shipment information can either be manually entered or uploaded directly from your own order entry or warehouse management system. This

can be done through your desktop or via FTP in your preferred format — including Excel, ASCII, XML or DBF.

Once you've selected your carrier, **Logistics in a Box™** lets you electronically book your shipment with them and print the necessary shipping documentation. The system allows you to generate shipping reports, so you can track the status of all of your shipments, on-line and in real-time. **Logistics in a Box™** also provides on-line, back-end reporting, for billing, claims and a number of other management needs.
